## IN THE SPECIFICATION:

Page 15, beginning at line 14, please amend the paragraph to read as follows:

FIGURE 7 Provides identification of residues in VVQVVA (SEQ ID NO:9) required for IL-16 inhibition. The native sequence peptide VVQVVA and two related oligopeptides with non-conservative amino acid substitutions (VKQVVA (SEQ ID NO:10) and VVQKVA (SEQ ID NO:11)) were evaluated for their capacity to act synergistically with peptide B in blocking IL-16-stimulated splenocyte motility. Each of the indicated 6-residue peptides at the concentrations indicated in the figure (0.5 x 10<sup>-6</sup> M to 0.5 x 10<sup>-9</sup> M) were combined with peptide B at a fixed concentration of 0.5 x 10<sup>-8</sup> M. Results are expressed as the mean % control migration ± SEM for three experiments. Asterisks indicate a significant difference (p < 0.05) in migration between cells stimulated with rIL-16 alone and cells stimulated with rIL-16 in the presence of peptide.
